

Projects involving experimental animals

Regulation for initiating payments and calling off further installments

For research projects involving experimental animals - irrespective of whether the animals are paid for by the Swiss Cancer League (SCL)/Cancer Research Switzerland (CRS) or another source - the line of credit will not be opened, and further installments will not be paid, until a valid approval of the work by the local supervisory body (e.g. the cantonal veterinary office) and the enclosed form "Ethical principles and guidelines for scientific animal studies" have been signed and submitted.

In your own interest, please notify SCL/CRS, the cantonal veterinary office and, where appropriate, a local animal ethics committee of your research project simultaneously wherever possible and send us their respective opinions as soon as possible.
